

Introducing a smart charge control system...

After you plug them in, how can you be sure they're ready when you need them?

Now you'll know they're ready and charged – at the lowest possible rate.

Introducing
EVauto®
fleet charging control system

Powered by

Now that you've decided to get rid of your gas guzzlers and add electric-powered vehicles to your fleet, welcome to a whole new world of other challenges.

To start, your facility's electric costs will be higher. A lot higher if you don't understand how the power company charges for electricity and how you can take advantage of it to get the best rates. And what if one of your vehicles fails to charge and is unavailable for the next day's work?

All you have to do is plug in.

EVauto® fleet charging control system consists of two powerful, easy-to-use, proprietary EV control management tools that will automatically reduce your electric vehicle charging costs, improve your vehicle availability and give you important operational data for better fleet management.

Designed to deliver electrical cost savings

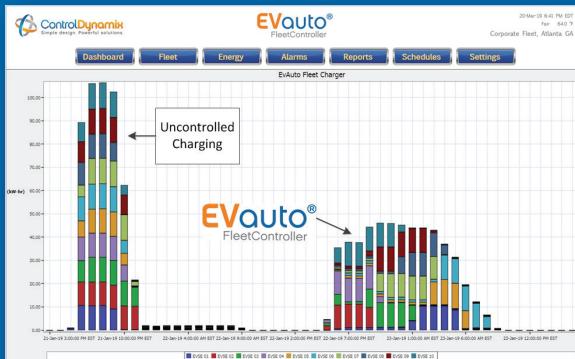

Automatically reduces EV charging costs and improves vehicle availability

EVauto® FleetController, the intuitively designed foundation of the system, manages the charging of every vehicle in your fleet, dynamically adapting to each day's rates and conditions.

- Uses smart load management to reduce peak energy consumption
- Allows you to easily schedule and take advantage of time-of-use rates
- Delivers EVSE fault alarms in real time
- Supports scheduled DR compliance and (optional) Open ADR connection
- Tracks energy use for each charger

Kilowatt-hour usage with and without FleetController

Peak load management that can control your charging costs

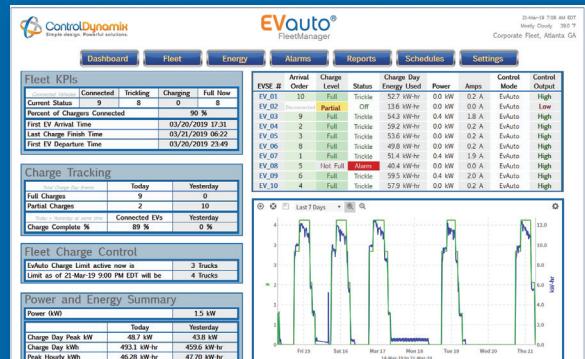

Provides minute-by-minute operational data for better EV fleet management

EVauto® FleetManager provides a real-time cloud-based actionable daily summary of each vehicle's charging operations.

- Provides real-time charging status for all connected vehicles via dashboard
- Alerts you of charging issues, including no connection, no charge, not-full-upon-departure and EVSE faults
- Tracks fleet and individual vehicle arrival and departure times
- Uses revenue-grade metering to give you detailed trending of energy usage, charging duration and peak energy period usage
- Summarizes fleet data to simplify finetuning your FleetController schedule

FleetManager dashboard

All the data you need to manage your fleet charging in one place

Powerful and comprehensive, yet intuitive and easy

EVauto® uses complex algorithms you'll never see. What you will see are two systems so easy to use you won't believe they can do so much - like help you take advantage of confusing utility tariffs to avoid spending too much on electricity and alert you if any charging equipment fails and leaves you with a non-usable vehicle for the day. And much, much more.

Easy to use and install

- Truly plug and play - operators just plug in and the system does the rest
- Compatible with most standard EVSE electric vehicle charging station manufacturers
- Shipped completely ready for easy installation
- Can be commissioned remotely
- Uses an onboard, advanced cellular modem so there's no need for a data connection
- Can be ordered for indoor or outdoor mounting
- Expandable as your charger installation grows
- Saves so much in electricity costs it can pay for itself in less than three years

EVauto means ROI.

EVauto automatically reduces your energy charging costs and works with any OCPP 1.6j charger regardless of size or manufacturer to accommodate your growing fleet.

EVauto® is so accessible you'll never have to wonder

With your data in the cloud, EVauto® is accessible 24/7 from anywhere using your desktop or laptop computer - PC or Mac - or even the smartphone in the palm of your hand. The ultimate benefit is the peace of mind that wherever you are, your vehicles are charging at the most cost-effective times and will be ready to go in the morning when you are.

Who we are

From our corporate headquarters conveniently located in Atlanta, Georgia, we serve clients throughout the country. Our senior management team has over of 25 years of domestic and international IT experience and a strong history of business, academic and technological accomplishments.
